Cyber Resilience Services

ABOUT US

Who We Are

The Cyber Resilience Centre for Wales (WCRC) is a not for profit company run by policing to help improve cybercrime prevention for smaller organisations in our region. The Centre offers affordable, high quality cyber resilience services in partnership with the National Cyber Resilience Centre Group's (NCRCG) Cyber PATH initiative.

Our Services

The Centre provides nine cyber resilience services, designed especially for smaller business, including the self-employed and third sector. Our services are regularly reviewed with government and law enforcement cybercrime data, to ensure that we help you improve your resilience from the types of cyber threat that are most common for your type of organisation. Our services are delivered by the NCRCG's Cyber PATH student team, under the supervision of our leading cyber security practitioners.

ABOUT CYBER PATH

What is Cyber PATH?

Cyber PATH, coordinated centrally by NCRCG, employs exceptional students from universities across the country who are looking to shore up the nation's defences against cybercrime and gain vital experience in a commercial setting.

We've interviewed and selected the best talent from the region, working with undergraduate and postgraduate students. They're passionate, background checked, and insured – and they work under the supervision of our Cyber PATH experienced national cyber specialists, delivering each service using industry-standard tools and techniques.

Why Students?

Cyber PATH allows small and medium businesses to access practical and bespoke support from the WCRC at an affordable rate.

Students are paid appropriately for their work whilst ensuring they have the flexibility and time to balance the programme's activities with their university studies. With unique workplace experience and BPSS vetting, Cyber PATH greatly enhances students' employability upon graduation.

This means that whilst you benefit from affordable priority cyber resilience services, tailored to suit smaller organisations, we can prepare and speed up the UK's talent with high quality work experience to have them ready to ensure law enforcement, defence and critical national infrastructure can fill their skills gap to protect us all at work and at home.

> **Cyber PATH allows smaller businesses to access practical, affordable and bespoke support from the WCRC at a highly subsidised rate.**

CYBER PATH PROCESS

How does it work?

WCRC will arrange a conversation with you to agree your cyber concerns and needs; we'll then follow up with a more detailed conversation with one of the technical team to explore the relevance and extent of the work you require, which can vary depending on the complexity of your own organisation and systems.

We'll then give you an obligation-free quotation for the work, and if you want to engage our team, we'll find the right person from our Cyber PATH team to deliver that work in a timely and professional manner. The work is overseen by our experienced supervisors. We always provide full reporting, and a presentation of findings, at which you can ask questions and develop a more detailed understanding. And if we uncover any high-risk issues during the process, we'll let you know immediately, and help you navigate how to remediate these.

1 Initial discovery session

2 Cyber PATH team fulfil requested services

3 Findings report is prepared & sent to you

4 Findings are implemented to strengthen your cyber resilience, either by your internal function or external partners

OUR SUPPORT

How we can support you

Part of our support service here at WCRC is to help you learn more and discover what's relevant for your organisation as well as protect you from buying things you don't need.

We are a not-for-profit company and police led. Our trusted team can help you identify which service is most suited to you to begin with, support you through that process, and if at the end of it you need a commercial provider for wider support, then we can also point you in the direction of our Partners, which are government approved Cyber Essentials scheme certifiers.

We are a friendly and approachable team. We are a jargon-free zone and genuinely here to help protect organisations in Wales from the ever-expanding threat that is cybercrime.
Conversation is a great place to start, if you like to ask us some questions, we can help you find the answers.

Discover the benefits of our free community and stay informed with regular updates. Sign up now on our website.

If you wish to find out more, you can contact us via **our website** or directly by emailing us at **enquiries@wcrcentre.co.uk**.

CYBER RESILIENCE SERVICES

SECURITY AWARENESS TRAINING

The training is focussed on those with little or no cyber security or technical knowledge and is delivered in small, succinct modules using real-world examples.

CORPORATE INTERNET DISCOVERY

This service may be used to learn what is being said on the internet about an organisation, what information employees are releasing or if there are any damaging news stories, social media posts or associations.

INDIVIDUAL INTERNET DISCOVERY

The information gathered in this type of discovery might be used to support pre-employment checks, to manage potential threats to a Director of an organisation or their families, or to understand more about a specific person of interest.

REMOTE VULNERABILITY ASSESSMENT

Remote vulnerability assessments are focussed on identifying weaknesses in the way your organisation connects to the internet. Service reporting will provide a plain-language interpretation of the results and how any vulnerabilities might be used by an attacker, as well as simple instructions on how any vulnerabilities might be fixed.

FIRST STEP WEB ASSESSMENT

This service provides you with an initial assessment of your website to highlight its most pressing vulnerabilities, focussing on the reconnaissance stage for the site. FSWA is considered an initial light touch assessment of the website compared to the complete Web App Testing service offered.

INTERNAL VULNERABILITY ASSESSMENT

The service will scan and review your internal networks and systems looking for weaknesses such as poorly-maintained or designed systems, insecure Wi-Fi networks, insecure access controls, or opportunities to access and steal sensitive data.

WEB APP VULNERABILITY ASSESSMENT

This service assesses your website and web services for weaknesses. The service reporting will describe in plain-language, what each weakness means to your business and the risks associated with each. Service reporting will include plans and guidance on how to fix those weaknesses.

SECURITY POLICY REVIEW

This service offers a review of your current security policy, how it is written and how it is implemented.

CYBER BUSINESS CONTINUITY REVIEW

This service reviews your business continuity planning and your organisation's resilience to cyber-attacks such as ransomware.
